BRAC UNIVERSITY
Inspiring Excellence

[redacted]

Abstract

Neuromarketing, which may include specialized packaging, content, [redacted] marketing, is [redacted]. We will examine AI-based systems for [redacted] the accuracy, processes, and definitions of the issue, we will employ both first- and second-hand datasets. In our method we are [redacted], to develop a multimodal model of the emotions of consumers.

Research Objective

1. **To overcome** [redacted] intelligent an [redacted] has to be con [redacted]
2. **Multimodal** [redacted] also uses brai [redacted] customer em [redacted]
3. **The method** [redacted] classification [redacted]

Methodology

[redacted]

Data Pre-processing

[redacted]

Figure 1. Data Pre-processing steps.

Literature Review

A paper Introduced EmotionMeter , a multimodal framework for identifying human emotions using EEG and eye movements. A six-electrode location above the ears that may be installed in a headband has been created. When [redacted] combining EEG and eye movements with multimodal deep learning [6]. Moreover,Zhao et al. [5] published a brand-new method for [redacted] scholarly effort. It is inspired by the fact that prosody is hierarchical and allows for several [redacted] and-true visualization techniques and [redacted] ail [4].

Study Pipeline

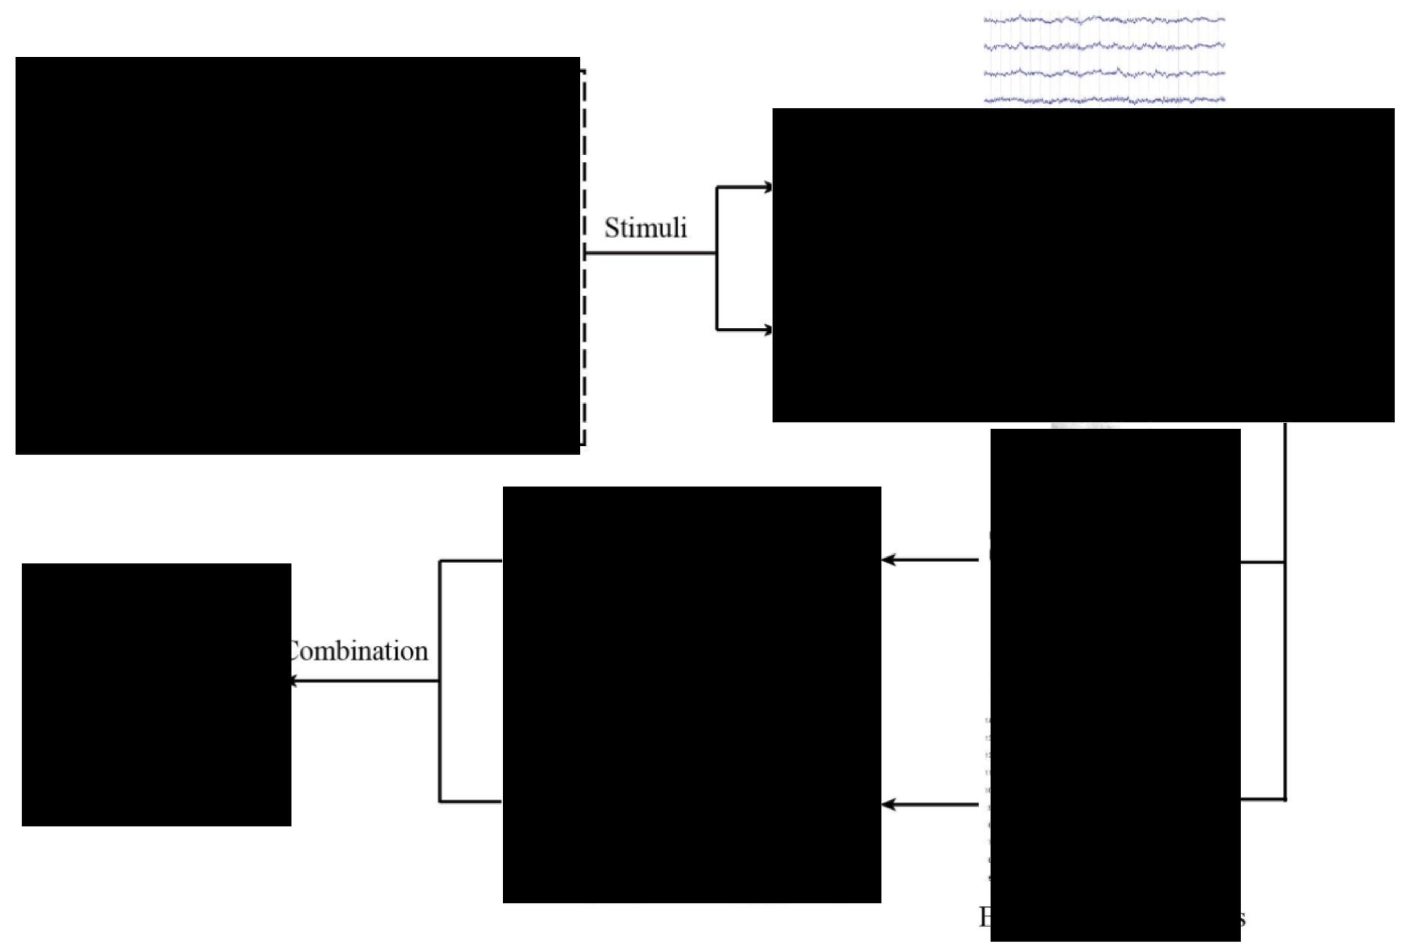

Figure 2. Our research plan to detect consumer [redacted] g strategy [6].

Dataset

[redacted] ected from 15 Chinese [redacted] advertising clips to [redacted] ye movement signals [redacted] 00 Hz from a 62- [redacted] δ (1-4 Hz), θ (4-8 Hz), α [redacted] d to visualize the [redacted]

Visualization

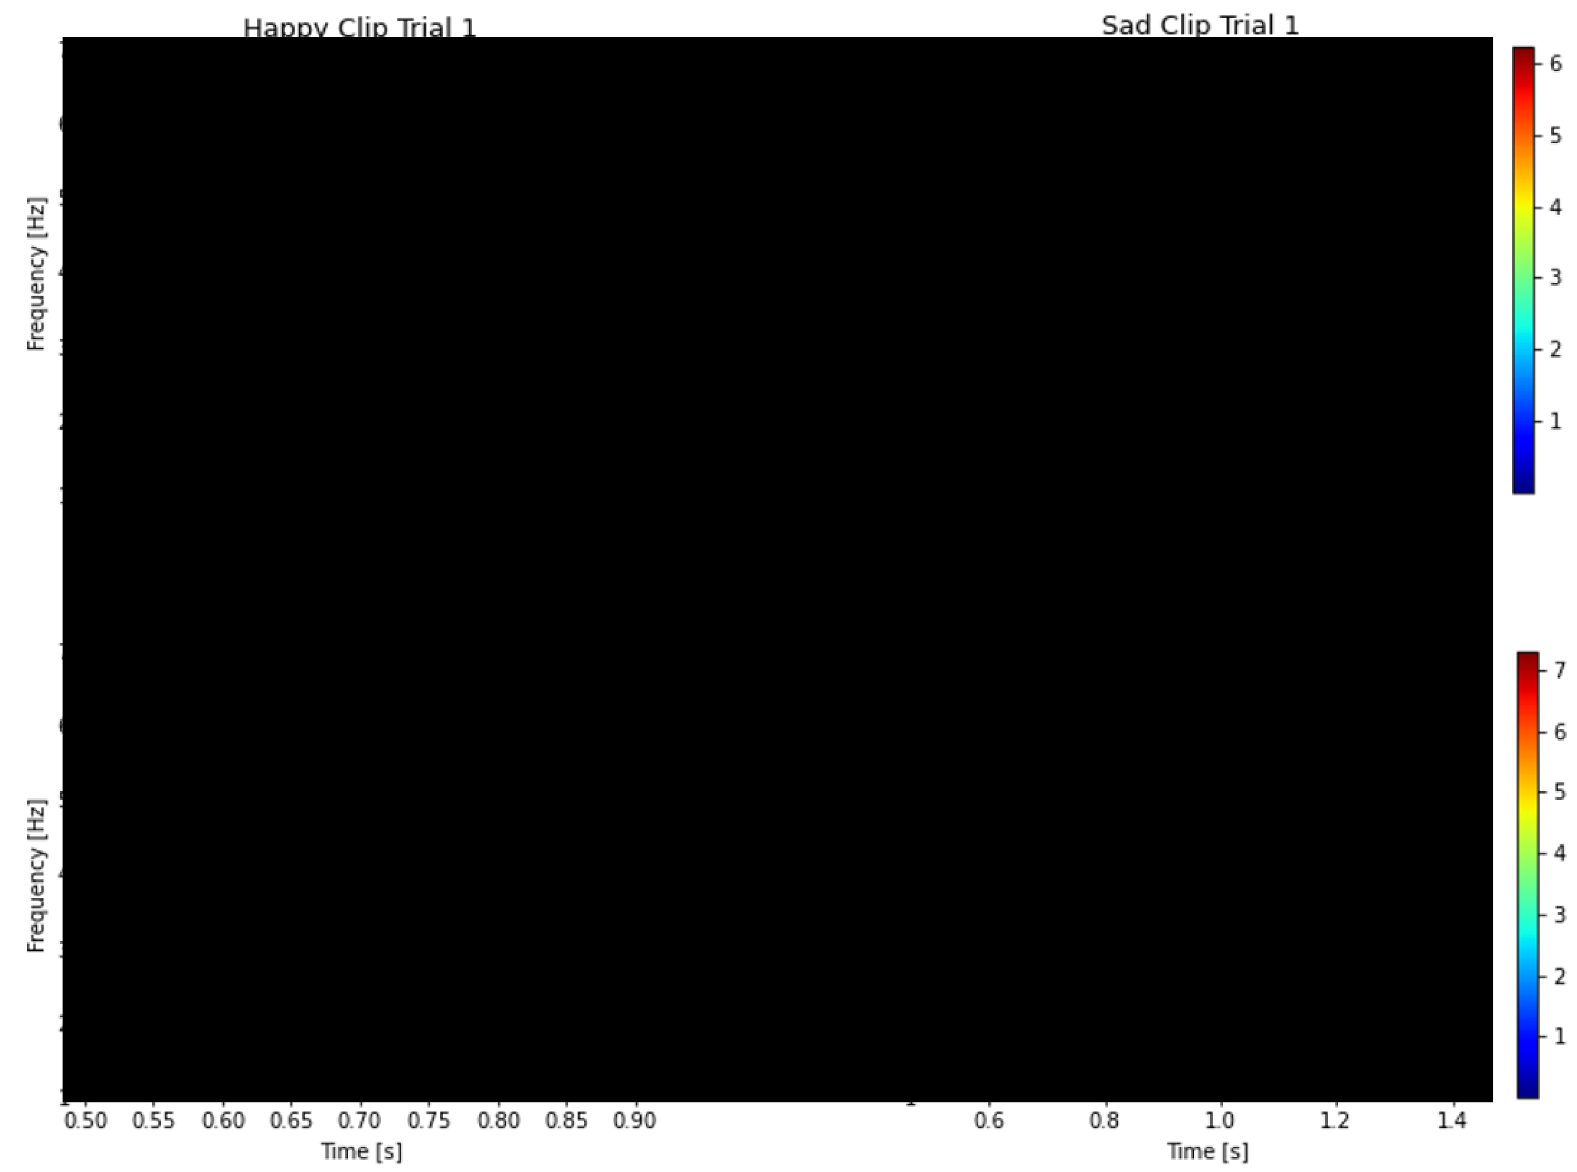

Figure 3. Various rhythms in the [redacted] of 4 separate emotion related clips.

Analysis

The spectrum as a functio [redacted] spectrogram visualization. [redacted] Hz-sampled EEG signal a [redacted] spanning 5 frequency band [redacted] traction from 62 channel E [redacted] ous rhythms of the EEG si [redacted] arate emotion-related clips [redacted] neutral emotions indicate [redacted] frequencies of around 6 [redacted] ter breaking up the time se [redacted] gram's goal is to compute t [redacted]
