

Core System Graph: Entity Relationships Across the Four-Tier Banking Hierarchy

(WORLD_BANK → NATIONAL_BANK → LOCAL_BANK → BANK_USER)

LEGEND

- PK** Primary Key
FK Foreign Key
UQ Unique Constraint
- | One to One
—> Many (One to Many)
----- Foreign Key Reference

RELATIONSHIP SUMMARY

Relationship	From	To	Cardinality
HAS	WORLD_BANK	NATIONAL_BANK	1 to Many (1..*)
HAS	NATIONAL_BANK	LOCAL_BANK	1 to Many (1..*)
HAS	LOCAL_BANK	BANK_USER	1 to Many (1..*)

NOTES

- The model enforces a strict four-tier hierarchy.
- Each child entity must belong to exactly one parent in the tier above.
- Deletion of a parent is restricted if dependent children exist.
- UQ = business key uniqueness within scope.
